

Renewable Energy Reports

This is a detailed report required by Local Planning Authorities as part of a planning application. The aim of the statement is to demonstrate that the builder / developer has considered using renewable energy technologies and the result of using these will reduce the developments' predicted carbon dioxide emissions. It will indicate the following points:

- Definition of the energy efficiency of the development in reference to the carbon emissions that are going to be achieved (using a SAP calculation).
- Identification of measures to be employed in attaining targets of energy consumption.
- Estimation of the carbon emissions from the development.
- Evaluation of the appropriate low or zero carbon technologies for the development.

Premier Guarantee can produce detailed Energy Reports showing which renewables have been considered and the overall reduction in carbon emissions delivered by the renewable installed. Our reports comply with the latest regulations and demonstrate the predicted energy usage in an easy to understand way, which your Planning Officer will readily accept and make it easy for you to meet the requirements of your Planning Department.

We will make recommendations based on your specific site requirements, with a view to minimising budgets and maximising long term returns, as well as ensuring any new systems employed on site are easy to use and maintain for the home owner.

Our reports are presented in a simple, straightforward manner giving you the practical advice you need for implementing zero carbon technologies into your homes.

For further information on Renewable Energy Reports, contact our team on 08444 120 888 or email services@premierguarantee.co.uk.
