

SBEM Calculations

Simplified Building Energy Model or SBEM is the government approved method for calculating the carbon emission rates of commercial buildings.

SBEM calculations are mandatory requirements for any commercial development and must be included on any Building Regulations submissions you make.

Our Energy Assessors have many years of experience in Part L Building Regulations compliance and have undertaken calculations on a range of commercial projects.

Our service includes the following features:

- We will provide an Energy Performance Certificate free of charge with every SBEM calculation we produce.
- Each client will receive a free consultation service to review their application.
- We provide national coverage and offer testing services on any type of commercial unit.
- Fully accredited service offered through Stroma.
- Our rates are amongst the lowest available on the market.

Alongside this process, for larger or more complex projects, our Energy Assessors can attend design team meetings providing a more integral consultancy service.

For a free quotation, or for further information, please contact our team on 08444 120 888 or email services@premierguarantee.co.uk.
